

Radiant Shield™ is a versatile radiant barrier that also acts as a vapor barrier. It can be used in a variety of residential and commercial applications where a reflective barrier is needed.

Experience Radiant Shield™!

Radiant Shield™ is a cross-woven radiant barrier with superior strength and tear resistance. It can be utilized as both a vapor barrier and a radiant barrier. When used in conjunction with an air space, **Radiant Shield™** can reflect a significant amount of heat back to its source*.

Applications

- Attics
- Crawl spaces
- Walls & ceilings
- Joist space under radiant heating systems

Features

- High tear resistance
- Reflects up to 94% of radiant heat
- Vapor barrier properties
- Unaffected by moisture
- Cuts & staples easily

Roll Sizes

- 18" x 250' - Designed to fit in a 16" on center joist space
- 26" x 250' - Designed to fit in a 24" on center joist space
- 48" x 250'

Recommendations - Foil surface should be installed facing a minimum 3/4" air space. If air space will be present on both sides of the material, install the foil side in the direction where dust accumulation is least likely to occur (i.e. facing down or toward an enclosed space). Dust accumulation on foil surfaces has been known to decrease reflectivity and increase the emmissivity of a radiant barrier material.
